		08/02/2010	PAPER	

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/539,045	Applicant(s) ULIN ET AL.
	Examiner DENNIS M. WHITE	Art Unit 1797

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 03 June 2010.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 15-29 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 15-29 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 15 June 2005 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
 3) Information Disclosure Statement(s) (PTO/GS-68)
 Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date _____
 5) Notice of Informal Patent Application
 6) Other: _____

DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 15-21 and 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jennings (US 2002/0101310) in view of Commarmot et al (USP 4,693,867).

Regarding claims 15-17 and 25, 27-29, Jennings teaches an instrument for microwave-assisted chemical processes comprising:

a microwave transparent reaction vessel 105 having an open upper end and a closed bottom end;

a collet assembly 91 having a through hole ("a cap having a through hole");

a septum 134 made of a material, preferably an appropriate polymer or silicone related material ("sealing diaphragm" "sealing, elastic diaphragm") (Para. 0072-0076)

a removable attenuator 33 ("sleeve") with a through hole, the vessel 105 extending axially through the attenuator, the collet securing the vessel to the attenuator (see Fig. 11) while clamping the septum to form a pressure seal (Para. 0072) ("diaphragm for sealing the open upper end of the vessel"). The open upper end of the vessel is formed with a widening portion. The widening portion is received in the attenuator. The device is used in methods for performing microwave-assisted chemical reactions including steps of initiating or accelerating chemical reactions. The collet assembly 91 acting as a unit includes features 86, 107, 110 and 106 (see Fig. 11 below). The collet assembly therefore holds the septum 134 ("diaphragm") and the

attenuator 33 ("sleeve") ("cap extending over the diaphragm and the sleeve so as to secure the vessel to the sleeve").

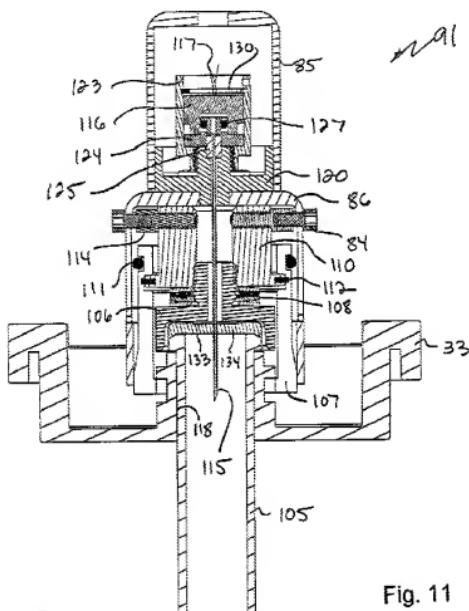

Fig. 11

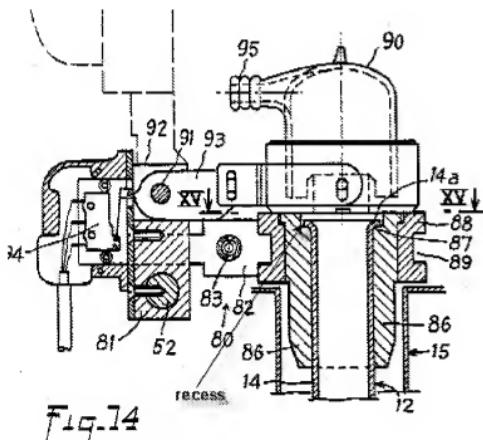

Jennings is silent about the widening portion is received by a corresponding recess formed in an end plane of the attenuator, and the recess providing a seat for the widening portion in the open upper end of the vessel.

Commarmot et al teach a container 12 ("micro vial") assembly for performing microwave-assisted chemical reactions, the assemble comprising: a container 12 made of glass ("a micro-wave transparent reaction vessel having an open upper end and a

Art Unit: 1797

closed bottom end"); a cover 90 ("cap") having a tube 95 ("through hole"), wherein two half-shells 86 ("a sleeve") is framed with a through hole, the container 12 ("vessel") extending axially through the two half-shells 86 ("sleeve") and the cover 90 ("cap") securing the vessel to the sleeve while clamping, the open upper end of the vessel being formed with a widening portion, the widening portion being received in a corresponding shoulder 87 ("recess") formed in an end plane of the sleeve, the shoulder providing a seat for the widening portion in the open upper end of the vessel (see Fig. 14 below). It is desirable to provide a shoulder ("recess") to hold the widening portion of the vessel in order to hold the reaction vessel in a defined position. Commarmot teach the upper end of the two half-shells 86 ("sleeve") is formed circumferentially for engagement with the cap, the sleeve having a first diameter portion running from the upper end to meet a reduced diameter portion in the lower end of the sleeve (see Fig. 14 above). Commarmot teach the portion of reduced diameter in the lower end of the sleeve is a truncated cone.

Art Unit: 1797

Simple substitution of one known element for another to obtain predictable results is held to be obvious. Therefore, it would have been obvious to one of ordinary skill in the art to substitute the sleeve 86 of Commarmot with the attenuator of Jennings because they are known sleeves to hold microwave reaction vessels in a defined position during the reaction.

Regarding claim 18, Jennings/Commarmot teach the widening portion of the vessel and the seat in the end plane of the sleeve are both conical in shape (Jennings: Fig. 13 and Commarmot: Fig. 14).

Regarding claims 19-21, Jennings/Commarmot the container has a rim that extends to the diaphragm (Jennings: Fig. 11 and Commarmot: Fig. 8), sealing the open end of the vessel wherein a reducing radius portion smoothly transforming into a portion of continuous radius defining a reaction chamber of the verse cavity. Jennings is silent

Art Unit: 1797

that the rim protruding above where the shoulder and flange of the sleeve and the upper rim extends transversely. Commarmot further shows container 12 wherein the upper rim extends transversely (see Fig. 8 below).

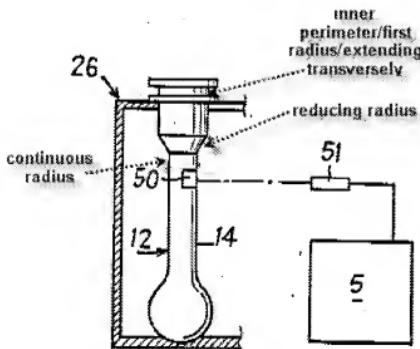

Fig. 8

Simple substitution of one known element for another to obtain predictable results is held to be obvious. Therefore, it would have been obvious to one of ordinary skill in the art to substitute the reaction vessel 12 of Commarmot with the reaction vessel 105 of Jennings because they are known reaction vessels to perform high pressure reactions activated by microwaves. It is noted that when the vessel is supported in the sleeve, the rim is being dimensioned to be depressed in the lower side of the diaphragm.

Regarding claims 23-25, Jennings/Commarmot teach the vessel has an inner volume. The inner volume is fully capable of including a head-space volume which is

less than 20 times that of the smallest reaction mixture volume contained in the vessel, for performing microwave-assisted chemical reactions on small volumes of 500 .mu.l or less, and for performing microwave assisted chemical reactions on small reaction mixture volumes

Regarding claim 26, Jennings/Commarmot teach the outer perimeter of the sleeve is dimensioned for bridging the radial distance between a wall of the vessel and an entrance diameter, of a microwave cavity in the system.

3. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jennings (US 2002/0101310) in view of Commarmot et al (USP 4,693,867) and further in view of Bennett et al (USP 5,520,886).

Jennings/Commarmot et al teach the limitations of claim 15 as per above.

Regarding claim 22, Jennings/Commarmot teach the bottom of the container 12 can be generally semi-spherical in form or have a flat bottom if the container is of the ordinary tubular type or in the form of a bulb in the case of a flask. Commarmot is silent about the bottom located above the terminal end of the vessel.

Bennett et al teach sealable container assemblies include containers for materials which are to be microwave heated. The bottom of the reaction vessel is formed above the terminal end of skirt 31. It is desirable to form the bottom above the terminal end of the container to provide a skirt that avoids dangerous explosions by allows for a more gradual failure of the container. The skirt also allows the container to stand upright on its own when the bottom is rounded.

Therefore it would have been obvious to one of ordinary skill in the art as motivated by Bennett et al to form the bottom of the reaction vessel of Commarmot et al above the terminal end of the skirt as in Bennett et al because the skirt facilitates distortion downwardly of the container bottom and thereby promotes a more gradual failure of the container and slower release of contents during high pressures (col. 3 lines 40-47).

For Claim 22, it is noted that this claim contains product-by-process language. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process, consult *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). In this case the bottom of the reaction vessel of Commarmot/Bennett seems similar to those instantly claimed.

Therefore, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product, consult *In re Marosi*, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983).

Response to Arguments

4. Applicant's arguments filed 6/3/2010 have been fully considered but they are not persuasive. Applicants argue that the collet 86 of Jennings does not extend over the septum and the attenuator 33 but that the collet 86 is positioned within the attenuator, and therefore cannot be read on the cap of the present claims that extends over the diaphragm and the sleeve. The argument is not persuasive because the Office Action 3/3/2010 page 2 refers to collet assembly 91, not 86 and the collet assembly 91 is being

read on the "cap" of the present claims. The collet assembly 91 contacts the septum 134 at 106 ("extending over the diaphragm") and further extends over the attenuator 33 at 107 ("extending over the sleeve"). Therefore the collet assembly 91 meets the claim limitations regarding the cap. It is possible that the sleeve 86 of Commarmot is being confused with the collet assembly 91 when referring to collet assembly 86 in the arguments.

5. Applicant point out that during the interview it was agreed that the references Jennings and Commarmot fails to disclose or suggest "the cap extending over the diaphragm and the sleeve so as to secure the vessel to the sleeve while clamping the diaphragm for sealing the open upper end of the vessel". It is noted that no agreement was reached regarding this particular claim language that would define over the prior art of record, but it was agreed that the cap in applicant's figure 2 and 5 is different in that it is one single piece, whereas the collet assembly 91 in that the collet assembly is made up of several parts.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1797

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DENNIS M. WHITE whose telephone number is (571)270-3747. The examiner can normally be reached on Monday-Thursday, EST 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
